

WHAT'S NEW?

Einstein's gravity rule holds up in quantum test

EXPRESS NEWS SERVICE
@ Hyderabad

AN international team of physicists, including Nobel laureate Professor Sir Roger Penrose, has experimentally shown that Einstein's equivalence principle holds when tested on a quantum object, providing a new link between gravity and quantum mechanics. The study, led by researchers from Ben-Gurion University of the Negev, the University of Ulm and the University of Oxford, was published in *Science Advances*.

At the heart of the experiment was the Quantum Galileo Interferometer, an apparatus that split the quantum wave of ultracold rubidium atoms into two paths. One part was held against gravity using a precisely controlled magnetic field, while the other was allowed to fall freely. When the two waves were brought together, their interference revealed a tiny difference in their quantum phase.

The measured phase matched the value predicted by applying Einstein's equivalence principle to the quantum system. The principle describes the local equivalence between the effects of gravity and acceleration and, in the context of free fall, means that a freely falling observer cannot locally distinguish gravity from an absence of gravitational effects.

Professor Ron Folman said the experiment probes how Einstein's theory of gravity and quantum mechanics might ultimately fit together:

TOKAMAKS KEEP PLASMA IN PLACE

Powerful magnetic fields confine the superheated plasma inside a doughnut-shaped chamber, preventing it from touching the reactor walls

Sun

SIDDHARDHA GATTIMI
@ Hyderabad

FOR billions of years, the Sun has been running the natural fusion process scientists have spent decades trying to reproduce on Earth. That effort is now advancing on multiple fronts — from laser-driven ignition and ultra-long plasma runs to compact tokamaks and giant superconducting magnets.

Bengaluru-based Pranos Fusion has unveiled PRAGYA, a compact, low-aspect-ratio tokamak that the company

FUSION GETS HOTTER AND HOTTEST

WHAT IS FUSION?

Fusion powers stars. The most widely studied reaction combines two hydrogen isotopes to form helium and a neutron, releasing energy

THE GLOBAL RACE IS EVOLVING

7.9 MJ
NIF, US: 7.9 MJ fusion yield in June 2026

1,066 secs
EAST, China: 1,066 seconds of high confinement plasma in 2025

7.9 MJ
JET, Europe: 69.26 MJ from a final deuterium-tritium pulse

1,337 secs
WEST, France: 1,337 seconds of hydrogen plasma in 2025

Fusion research is advancing through hotter plasmas, compact tokamaks, superconducting magnets and new reactor technologies

describes as India's first privately developed tokamak. Meanwhile, China has demonstrated the scale of its own fusion programme by completing a 582-tonne superconducting magnet for a future fusion reactor.

PRAGYA has produced plasma and is designed as an experimental platform to study and control the superheated state of matter needed for fusion.

Its significance also lies in

bringing private-sector participation to an Indian fusion programme that has historically been driven largely by government institutions.

Why fusion is so difficult

Fusion powers stars. For future fusion power plants, the most widely studied reaction combines two hydrogen isotopes — deuterium and tritium — to form helium and a neutron, releasing energy.

On Earth, this requires

temperatures of roughly 100–150 million degrees Celsius. At those temperatures, fuel becomes plasma, an electrically charged state of matter. Since no conventional material can simply contain plasma at such temperatures, magnetic-confinement systems use powerful magnetic fields to keep it away from reactor walls.

The most established magnetic-confinement approach is the tokamak, a doughnut-

shaped chamber that uses magnetic fields to confine plasma. But producing plasma is only the first step. It must remain sufficiently hot, dense and stable for long enough for fusion reactions to become useful.

The energy density of fusion fuel is enormous. The US Department of Energy estimates that the energy released by just 1 gram of deuterium-tritium fuel is equivalent to about 2,400 gallons (9,000 litres) of oil.

If completely fused, about 1 kg of a deuterium-tritium mixture could theoretically release roughly 340 terajoules, equivalent to nearly 95 gigawatt-hours of energy.

At power-plant scale, International Thermonuclear Experimental Reactor (ITER) estimates that a 1,000 MW fusion plant would require only about 250 kg of deuterium-tritium fuel a year, compared with roughly 2.7 million tonnes of coal for a coal-fired plant producing the same amount of power.

Fusion takes many forms

Fusion research is advancing along several fronts: producing more energy in short bursts, sustaining plasma for longer periods and developing the technologies needed for future reactors.

At the US National Ignition Facility (NIF), laser-based experiments are pushing inertial-confinement fusion.

In June 2026, NIF achieved ignition for the 11th time, producing 7.9 megajoules of fusion yield from the target.

Earlier, in April 2025, it produced 8.6 megajoules from about 2.08 megajoules of laser energy delivered to the target. These are target-level figures — not net energy gains or electricity produced by the overall facility.

China is simultaneously tackling the engineering needed for larger fusion systems.

In June 2026, the Institute of Plasma Physics under the Chinese Academy of Sciences completed and tested a 582-tonne toroidal-field superconducting magnet for its fusion reactor programme. The magnet measures 21 metres long, 12 metres wide and 3.3 metres high and was described by its developers as the

world's largest superconducting magnet built for a fusion reactor.

It stores about 120 gigajoules of energy and is designed to generate the powerful magnetic field required to confine high-temperature plasma.

China's EAST tokamak sustained high-confinement plasma for 1,066 seconds in 2025, while its larger HL-3 tokamak achieved ion temperatures of about 120 million degrees Celsius and electron temperatures of about 160 million degrees Celsius. France's WEST tokamak, meanwhile, sustained hydrogen plasma for 1,337 seconds, or more than 22 minutes, in 2025.

India's fusion programme

Through the Department of Atomic Energy and the Institute for Plasma Research (IPR), India has built expertise in plasma confinement, superconducting magnets, heating systems, diagnostics and control.

IPR's programme includes the ADITYA-U and Steady-State Superconducting Tokamak (SST-1) tokamaks. India is also contributing major systems to ITER. The country has recently expanded into spherical tokamak technology. IPR's first spherical tokamak achieved first plasma in December 2025.

A paper published by IPR researchers in August 2026 describes the machine's commissioning and first-plasma experiments, including the use of a 2.45-GHz microwave system to assist plasma initiation.

The machine was commissioned as a low-cost platform for studying low-aspect-ratio tokamak physics, including non-inductive start-up, current drive and shaped plasma operation.

Spherical tokamaks have a much lower aspect ratio than conventional tokamaks, giving them a more compact geometry. They are being studied as a possible route to smaller fusion systems, although the configuration also brings engineering challenges. That leaves India with two parallel developments: a publicly developed spherical tokamak at IPR and a privately developed low-aspect-ratio tokamak at Pranos.

Canara Bank Kaveripattinam Branch
Door.No.1/630 A, Salem Main Road, Kaveripattinam, Krishnagiri - 635112

DEMAND NOTICE [SECTION 13(2)]

Notice dated 27-08-2026 issued u/s 13(2) of the Securitisation & Reconstruction of Financial Assets & Enforcement of Security Interest Act, 2002 by the **Canara Bank, Kaveripattinam Branch**.

M/s. Palani Murugan Traders (Proprietorship firm) Proprietor. M Alamelu 2/473 Rayal Nagar Kaveripattinam Krishnagiri 635112 **Mrs. Alamelu M (Proprietor/Mortgagor)** W/o. Murugesan 2/473 Rayal Nagar Kaveripattinam Krishnagiri 635112 **Mr. Palanivel R (Guarantor)** S/o. Raja 2/473 Rayal Nagar Kaveripattinam Krishnagiri 635112

The captioned notice sent to you by registered post could not be served on you and returned undelivered. I have reason to believe that you are avoiding service of the demand notice to you. Therefore, the contents of the notice are being published in this newspaper. You have availed **MSME WORKING CAPITAL** facility by executing relevant documents in favour of the bank to secure the repayment of the below said loan. You have committed default of repayment of the loan and an amount of **Rs.8,19,563.26 (Rupees Eight Lakhs Nineteen Thousand Five Hundred and Sixty Three Paise Twenty Six only)** with further interest from **01-08-2026** still outstanding in the books of accounts of the Bank and further interest at the rate agreed by you together with incidental expenses and other costs. To secure the money due or money that may become due to the bank, you have created the following security, among others, in favour of **Canara Bank, Kaveripattinam Branch** by way of equitable mortgage.

DETAILS OF SECURITY ASSETS

Name of Title holder **Mrs. Alamelu**

Property situated in Krishnagiri Registration District, Kaveripattinam SRD, Krishnagiri Taluk, Errahalli Village in S.No.514/2 measuring an area of 1035 Square feet bearing Plot No.25 inclusive of house bearing D.No.2/473, Rayal Nagar Within the Limits of Errahalli Panchayat and lying within the following boundaries: **East:** 20 feet Common Road **West:** Remaining portion of Plot No.25 belonging to Murugesan and Palanivel **North:** Plot No.26 belonging to Thangarasu **South:** 20 feet Common Road And Measuring East West 23 feet and North South 45 feet inclusive of Mamool way rights.

Therefore, you as a borrowers / guarantor in terms of the aforesaid notice have been called upon to pay the above said sum together with future interest thereon with monthly rest and costs etc to the bank within 60 days from the date of aforesaid demand notice and also stating that on your failure to comply therewith, I, the Authorised Officer shall exercise all or any of the rights under section 13(4) of the Securitisation & Reconstruction of Financial Assets & Enforcement of Security Interest Act, 2002. Please note that in the event of your failure to comply the demand on or before 60 days from the date of this Publication of the contents of the demand notice by these presents we intend to enforce the aforesaid security. This publication is made in terms of Rule 3(1) of Security Interest (Enforcement) Rules, 2002. In terms of Section 13(13) of the Act, you are restrained from alienating the secured assets herein from the date of notice without prior consent of the Bank.
