Musk looks to double Nvidia chips in Colossus 2

Elon Musk said Colossus 2, an AI computing cluster built by his xAI business, may more than double its current Nvidia Corp. chip count by the end of 2026. He gave the most detailed timetable yet for expansion plans for the Memphis-area cluster as he races to expand AI computing capacity. Colossus 2 now has 110,000 Nvidia GB200 chips and 440,000 GB300s, Musk said in a post on X.

Akamai signs \$11.6 bn Cloud deal with Anthropic

Akamai Technologies signed an \$11.6 billion Cloud services deal with Anthropic on Thursday, and issued a warrant that could give the AI lab up to 5 per cent stake in the cloud firm, sending its shares surging 22 per cent in extended trading. The agreement secures a long-term commitment from one of the fastest-growing AI firms, and adds to more than \$2.8 billion in multi-year Cloud infrastructure deals Akamai announced across its customer base this year. Under the seven-year contract, the warrant would give Anthropic the right to purchase Series-B shares at \$111.33 each that converts into about 7.7 million shares of Akamai's common stock.

OpenAI may preview GPT-6 Cyber in a few days

OpenAI is set to preview a cybersecurity-focused artificial intelligence (AI) model, GPT-6 Cyber, within days and launch a new product designed to help customers deploy it more securely and automatically, Fortune reported on Thursday, citing multiple sources familiar with the plans. Reuters could not immediately verify the report. OpenAI did not immediately respond to Reuters' request for comment outside regular business hours.

REUTERS

Australia steps up response to AI after health database breach

Even before a rogue OpenAI bot breached the database of Australia's health system, the government was escalating its rhetoric about the need to tighten regulation. The incursion on one of the country's most used government agencies may prompt a tougher stance as Australia readies AI-specific laws starting in 2027,

adding pressure to Australia-US relations already tested by Canberra's teen social media ban, experts said. The new regulations may also include mandatory reporting for AI firms if their products engage in security breaches, mirroring new Australian laws that require firms to disclose an intrusion within 72 hours.

After Bengaluru, Rapido's food delivery app Ownly expands to Hyderabad

UDISHA SRIVASTAV
New Delhi, 25 September

After initially kicking off its food delivery service Ownly from Bengaluru, ride-hailing firm Rapido has now expanded the service to Hyderabad.

The service was formally launched at the beginning of this year after a six-month pilot. During the pilot phase, which started in August last year, the service was available in select areas of Bengaluru, including Koramangala, HSR, and BTM Layout.

Ownly operates on a zero-commission model and does not charge restaurants any commission, instead it charges a subscription fee.

The platform currently partners with more than 20,000 restaurants.

A few months ago,

Rapido also integrated Ownly into its primary mobile application (app), aiming to make the food delivery service available to the platform's active users. With this integration, customers can order from Ownly directly within the Rapido app alongside booking rides.

On the other hand, the larger platform, Rapido, is present in more than 400 cities, and currently facilitates over five million rides per day. Its unified ecosystem spans booking bike taxis, auto rickshaws, cabs, parcel deliveries, flight bookings, and now, food delivery.

India's online food delivery market is expected to grow to nearly \$25 billion by 2029-30 (from an estimated \$9 billion in 2024-25), according to estimates by brokerage firm Jefferies.

GCCs push AI upskilling in bid to be 'future-proof'

AVIK DAS
Bengaluru, 25 September

Indian global capability centres (GCCs) are increasingly looking to retrain and reskill their employees to become proficient in AI, instead of depending on hiring externally from IT services and technology product firms, as they look to build teams who can deliver instant business impact.

The shift comes as AI begins to reshape the routine work that has traditionally powered GCCs. About 55 per cent of routine GCC work is already exposed to AI-driven automation, while 60 per cent of the workforce will require reskilling by 2030, according to a report by Dell and management consultancy firm Zinnov.

"The way we are looking at upskilling internally is in three phases. The first phase is building from AI literacy to AI fluency. Next we are looking at enterprise-level solutions beyond making your own job effective. Another perspective

Riding the tide

- GCCs looking to build from AI literacy to AI fluency
- Also aiming for teams that can deliver business impact from Day 1

- GCCs are rethinking their campus hiring strategies
- Even as bottom-level jobs are being automated, roles are evolving because of AI

that we are looking at is how AI can be used to rethink the way we are operating," says Nirguna Tilwankar, director and head of human resources at Catalyzt Brands India. She added the firm would actively reskill existing talent in areas such as AI-enabled productivity, data-driven decision-making, and

roles requiring business fluency. As the AI wave builds up, GCCs would need to mould their workforce, with many bottom-level jobs being automated. AI is also leading to the evolution of roles. For example, the role of data scientists is evolving into model operations engineers and data engineers into applied AI

Adani firm gets nod for ₹1 trn Odisha data centre park

HEMANT KUMAR ROUT
Bhubaneswar, 25 September

The Adani group is set to deepen its presence in the data-centre industry, as the proposal by one of its subsidiaries to develop a ₹1.04 trillion integrated data-centre park has been approved by the Odisha government.

Official sources said this is the second-biggest investment proposed by an Indian conglomerate in the country's data-centre sector, following RIL's proposed AI data centre and cable landing station, which is coming up with an estimated investment of ₹1.08 trillion in Andhra Pradesh. The

Odisha project is expected to generate about 1,000 jobs.

The project, cleared by the high-level clearance authority chaired by CM Mohan Charan Majhi, comes a year after the group unveiled a ₹1.4 trillion data-centre and AI-infrastructure project in partnership with Google in Vizag. This is the largest data-centre project announced in the country so far.

The Odisha data centre proposed by High Density Data Centre, a subsidiary of the Adani group, was among the 27 projects worth around ₹2.47 trillion recently cleared by the government. Data centres, IT/IT-

enabled services, and AI emerged as the largest investment segment, accounting for ₹1.42 trillion through four projects.

Hemant Sharma, additional chief secretary of Industries, said: "High Density Data Centre has proposed to develop a 1 Gw data centre. The state government has already earmarked around 250 acres of land at Naraj for the project," he told *Business Standard*.

Earlier this month, the Adani group and Abu Dhabi-based International Holding Company (IHC) had signed an agreement with the Odisha government for a ₹50,000 crore hyperscale AI data centre in Odisha. However, IHC's

engineers, according to data from Quess. The strongest movement is visible where the source role already has transferable technical foundations.

"For GCC leaders, the focus is on building teams that can deliver business impact from day one. This makes internal mobility, reskilling, and role-adjacent talent development critical. Organisations that can combine experienced talent with structured upskilling will be better positioned to support long-term enterprise mandates from India," says Kapil Joshi, CEO of Quess IT Solutions.

Sheenam Ohrie, MD of Broadridge India, says that while the firm used to hire a lot from Infosys and TCS, the strategy has changed towards engineering organisations such as Amazon, Google, Dell, and Nvidia. "We've also developed a very clear strategy around campus hirings and we see which are those top Tier-II colleges to get the best of that talent," she added.

involvement in the data centre project proposed by High Density Data Centre has not been officially announced. "The ₹1.04 trillion data-centre project has been proposed as a standalone venture," a source said.

Three more data-centre projects with a combined investment of ₹38,391 crore have been approved in Odisha. They are: HCLTech's ₹14,257 crore AI-optimised data centre in Khordha, Sentaforge AI's ₹22,634 crore AI data centre and GCC in Puri, and RKD Construction's ₹1,500 crore data centre in Kataka district.

Microsoft abandons personal chatbot race with Copilot reboot

MATT DAY
25 September

Microsoft is merging the consumer and workplace versions of its Copilot AI assistant into one product aimed at corporate customers, ceding the market for personal chatbots to OpenAI, Google and Meta.

At an event in Seattle this week, Microsoft executives gave a few dozen business and technology leaders a preview of what they're calling the new Copilot. The result of a six-month engineering effort, its latest iteration has absorbed the separate version for home use, and leaving the marketing that sought to position the firm as a builder of personal AI.

People have high expectations for workplace software, informed by their experience with smartphone apps, Jacob Andreou, executive vice president of Microsoft Copilot, told the audience of corporate customers on Wednesday. Importing some user experience features from the consumer app "made Copilot so much better in just the last few months," he said.

Microsoft's individual users, he added, tend to be people who like to poke around in PowerPoint and Excel, and are more interested in "the full power that we offer to enterprise users" than a simplified chat app.

The updated software, announced on Friday, gives users the ability to edit Word or Excel documents within a Copilot app or browser tab, addressing a common gripe that Microsoft's assistant had only limited reach into the firm's own productivity software. There's also a tab for a coding assistant to enable regular users to put together

Changing tack

- Microsoft's move comes after weaker consumer uptake than ChatGPT and Gemini
- After reboot, Copilot will edit Word and Excel files directly
- New tools will automate tasks and assist with coding

dashboards or automate tasks. Microsoft's Scout, an always-on assistant that coworkers can summon, is joining the Copilot package too, rebranded as Autopilot.

The new Copilot, which will be out soon, brings to a close one of Microsoft's biggest bets of the AI era. It became an uphill battle when ChatGPT sprinted to a billion users and Google deployed its Gemini personal assistant to the vast Android ecosystem. Comparatively few people took Microsoft up on its offer of a personal chatbot.

The retreat coincides with the arrival of Meta's Muse, a personal assistant that can act on users' behalf and now tops app download charts.

In interviews this week, Andreou and Charles Lamanna, an executive who oversees Microsoft teams working on some of Copilot's core workplace features, said Muse's success proved people were receptive to AI automation.
